

XII COMPUTER SCIENCE

CBSE Board - 2009

[Time allowed: 3 hours]

[Maximum Marks :70]

Instructions (i) *All questions are compulsory*
(ii) *Programming Language: C++*

1. (a)	What is the difference between call by value and call by reference? Give an example in C++ to illustrate both.	2								
Ans	<table><tr><th>Call By Value</th><th>Call by reference</th></tr><tr><td>✓ Call by value is used to create a temporary copy of the data which is transferred from the actual parameter in the final parameter.</td><td>✓ Call by reference is used to share the same memory location for actual and formal parameters</td></tr><tr><td>✓ The changes done in the function in formal parameter are not reflected back in the calling environment.</td><td>✓ The changes done in the function are reflected back in the calling environment.</td></tr><tr><td>✓ It does not use & sign Example: <pre>#include <iostream.h> void change(int x, int y) { x = 10; /* change the value of x */ y = 20; /* change the value of y */ } void change(int x, int y); void main () { // local variable declaration: int a = 100; int b = 200; cout << "Before change, value of a : " << a << endl; cout << "Before change, value of b : " << b << endl; change(a, b); cout << "After change, value of a : " << a << endl; cout << "After change, value of b : " << b << endl;</pre></td><td>✓ It makes the use of the & sign as the reference operator. Example <pre>#include <iostream.h> void change(int *x, int *y) { *x = 10; /* change the value of x */ *y = 20; /* change the value of y */ } void change(int *x, int *y); void main () { // local variable declaration: int a = 100; int b = 200; cout << "Before change, value of a : " << a << endl; cout << "Before change, value of b : " << b << endl; change(&a, &b); cout << "After change, value of a : " << a << endl;</pre></td></tr></table>	Call By Value	Call by reference	✓ Call by value is used to create a temporary copy of the data which is transferred from the actual parameter in the final parameter.	✓ Call by reference is used to share the same memory location for actual and formal parameters	✓ The changes done in the function in formal parameter are not reflected back in the calling environment.	✓ The changes done in the function are reflected back in the calling environment.	✓ It does not use & sign Example: <pre>#include <iostream.h> void change(int x, int y) { x = 10; /* change the value of x */ y = 20; /* change the value of y */ } void change(int x, int y); void main () { // local variable declaration: int a = 100; int b = 200; cout << "Before change, value of a : " << a << endl; cout << "Before change, value of b : " << b << endl; change(a, b); cout << "After change, value of a : " << a << endl; cout << "After change, value of b : " << b << endl;</pre>	✓ It makes the use of the & sign as the reference operator. Example <pre>#include <iostream.h> void change(int *x, int *y) { *x = 10; /* change the value of x */ *y = 20; /* change the value of y */ } void change(int *x, int *y); void main () { // local variable declaration: int a = 100; int b = 200; cout << "Before change, value of a : " << a << endl; cout << "Before change, value of b : " << b << endl; change(&a, &b); cout << "After change, value of a : " << a << endl;</pre>	
Call By Value	Call by reference									
✓ Call by value is used to create a temporary copy of the data which is transferred from the actual parameter in the final parameter.	✓ Call by reference is used to share the same memory location for actual and formal parameters									
✓ The changes done in the function in formal parameter are not reflected back in the calling environment.	✓ The changes done in the function are reflected back in the calling environment.									
✓ It does not use & sign Example: <pre>#include <iostream.h> void change(int x, int y) { x = 10; /* change the value of x */ y = 20; /* change the value of y */ } void change(int x, int y); void main () { // local variable declaration: int a = 100; int b = 200; cout << "Before change, value of a : " << a << endl; cout << "Before change, value of b : " << b << endl; change(a, b); cout << "After change, value of a : " << a << endl; cout << "After change, value of b : " << b << endl;</pre>	✓ It makes the use of the & sign as the reference operator. Example <pre>#include <iostream.h> void change(int *x, int *y) { *x = 10; /* change the value of x */ *y = 20; /* change the value of y */ } void change(int *x, int *y); void main () { // local variable declaration: int a = 100; int b = 200; cout << "Before change, value of a : " << a << endl; cout << "Before change, value of b : " << b << endl; change(&a, &b); cout << "After change, value of a : " << a << endl;</pre>									

	<pre> } Value of a and b did not changed after over writing the value of x and y which contain the value of a and b. </pre>	<pre> cout << "After change, value of b :" << b << endl; } Value of a and b is changed after over writing the value of x and y which contain the value of a and b. </pre>	
(b)	Write the names of the header files to which the following belong: (i) puts() (ii) sin()		1
Ans	(i) stdio.h (ii) math.h		
(c)	Rewrite the following program after removing the syntactical error(s) (if any). Underline each correction. <pre> #include [iostream.h] #include [stdio.h] class Employee { int EmpId=901; char EName[20]; public Employee() {} void Joinint() { cin>>EmpId; gets(EName); } void List() { cout<<EmpId<<" "<<EName<<endl;} }; void main() { Employee E; Joining.E(); E.List() } </pre>		2
Ans	<pre> #include <iostream.h> #include <stdio.h> class Employee { <u>int EmpId;</u> char EName[20]; <u>public:</u> Employee() {} void Joinint() { cin>>EmpId; gets(EName); } void List() { </pre>		

	<pre> cout<<EmpId<<" "<<EName<<endl; } }; void main() { Employee E; <u>E.Joining()</u>; E.List() } </pre>	
(d)	<p>Find the output of the following program:</p> <pre> #include<iostream.h> void main() { int X[]={10,25,30,55,110}; int *p=X; while(*p<110) { if(*p%3!=0) *p=*p+1; else p++; } *p=*p+2; for(int I=4;I>=1;I--) { cout<<X[I]<<"*"; if(I%3==0) cout<<endl; } cout<<X[0]*3<<endl; } </pre>	3
Ans	<p>112*57*</p> <p>30*27*36</p>	
(e)	<p>Find the output of the following program :</p> <pre> #include<iostream.h> #include<ctype.h> void Encode(char Info[], int N); void main() { char Memo[] = "Justnow"; Encode(Memo,2); cout<<Memo<<endl; } void Encode(char Info[], int N) { </pre>	2

	<pre> for (int I=0;Info[I]!='\0';I++) if (I%2==0) Info[I]=Info[I]-N; else if (islower(Info[I])) Info[I] = toupper(Info[I]); else Info[I]=Info[I]+N; } </pre>	
Ans	HUqTlOu	
(f)	<p>Study the following program and select the possible output from it:</p> <pre> #include<iostream.h> #include<stdlib.h> void main() { randomize(); int Points; Points = 100 + random(LIMIT); for (int P=Points; P>=100;P--) cout<<P<<"#"; cout<<endl; } </pre> <p>(i) 103#102#101#100# (ii) 100#101#102#103# (iii) 100#101#102#103#104# (iv) 104#103#102#101#100#</p>	2
Ans	(i) 103#102#101#100#	
2. (a)	What is copy constructor? Give an example in C++ to illustrate copy constructor.	2
Ans	<p>A copy constructor is a special type of constructor that is used to create an object as a copy of an existing object. It takes an argument which is a reference to the object to be copied. Example:</p> <pre> #include<iostream.h> #include<conio.h> class copy { int var,fact; public: copy(int temp) { var = temp; } double calculate() { fact=1; for(int i=1;i<=var;i++) </pre>	

	<pre> { fact = fact * i; } return fact; } }; void main() { clrscr(); int n; cout<<"\n\tEnter the Number : "; cin>>n; copy obj(n); copy cpy=obj; cout<<"\n\t"<<n<<" Factorial is:"<<obj.calculate(); cout<<"\n\t"<<n<<" Factorial is:"<<cpy.calculate(); getch(); } </pre>	
(b)	<p>Answer the question (i) and (ii) after going through the following class :</p> <pre> class WORK { int WorkId; char WorkType; public: ~WORK() //Function 1 { cout<<"Un-Allocated"<<endl; } void Status() // Function 2 { cout<<WorkId<<":"<<WorkType<<endl; } WORK() // Function 3 { WorkId=10; WorkType="T"; } WORK (WORK &W) // Function 4 { WorkId = W.WorkId+12; WorkType=W.WorkType+1; } }; </pre>	2
(i)	<p>Which member function out of Function 1, Function 2, Function 3 and Function 4 shown in the above definition of class Work is called automatically, when the scope of an object gets over? Is it known as Constructor OR Destructor OR Overloaded Function OR Copy Constructor?</p>	
Ans	Function 1	

<p>(ii)</p> <p>Ans</p>	<p>Destructor</p> <p>WORK W; //Statement 1</p> <p>WORK Y(W); // Statement 2</p> <p>Which member function out of Function 1, Function 2, Function 3 and Function 4 shown in the above definition of class Work will be called on execution of statement written as Statement 2? What is this function specifically known as out of Destructor or Copy Constructor or Default Constructor?</p> <p>Function 4</p> <p>Copy Constructor</p>	
<p>(c)</p>	<p>Define a class RESORT in C++ with following description:</p> <p>Private Members:</p> <p>Rno // Data member to store Room No</p> <p>Name // Data member to store customer name</p> <p>Charges // Data member to store per day charges</p> <p>Days // Data member to store number of days of stay</p> <p>COMPUTE() // A function to calculate and return Amount as Days* Charges and if the value of Days * Charges is more than 11000 then as 1.02 * Days * Charges</p> <p>Public Members :</p> <p>Getinfo() // A function to enter the content Rno, Name, Charges and Days</p> <p>Dispinfo() // A function to display Rno, Name, Charges, Days and Amount (Amount to be displayed by calling function COMPUTE())</p>	<p>4</p>
<p>Ans</p>	<pre> class RESORT { int Rno; char Name[20]; float Charges; int Days; float COMPUTE(); public: void Getinfo(); void Dispinfo(); }; void RESORT:: Getinfo() { cin>>Rno; gets(Name); cin>>Charges; </pre>	

	<pre> cin>>Days; } void RESORT:: Dispinfo() { cout<<Rno<<" "<<Name<<" "<<Charges<<" "<<Days<<COMPUTE()<<endl; } float RESORT:: COMPUTE() { float Amount = Charges * Days; if (Amount>11000) Amount = 1.02 * Days * Charges; return Amount; } </pre>	
(d)	<p>Answer the questions (i) to (iv) based on the following:</p> <pre> class FaceToFace { char CenterCode[10]; public: void Input();void Output(); }; class Online { char website[50]; public: void SiteIn(); void SiteOut(); }; class Training: public FaceToFace, private online { long Tcode; float charge; int period; public: void Register(); void show(); }; </pre>	4
(i)	Which type of inheritance is shown in the above example?	
Ans	Multiple Inheritance	
(ii)	Write names of all the member functions accessible from Show() function of class Training.	
Ans	Register() SiteIn(), SiteOut(); Input(), Output();	
(iii)	Write name of all the member accessible through an object of class Training.	

Ans (iv)	Register(), Show(), Input(), Output(). Is the function Output() accessible inside the function SiteOut()? Justify your answer?																															
Ans.	No, function Output() is not accessible inside the function SiteOut(), because Output() is a member of class FaceToFace and SiteOut() is a member of class Online, and the classes FaceToFace and Online are two independent classes.																															
3. (a)	<p>Write a function SORTPOINTS() in C++ to sort an array of structure Game in descending order of Points using Bubble Sort. Note: Assume the following definition of structure Game</p> <pre>Struct Game { long Pno; // Player Number char PName[20]; long Points; };</pre> <p>Sample Content of the array (before sorting)</p> <table border="1"> <thead> <tr> <th>PNo</th> <th>Pname</th> <th>Points</th> </tr> </thead> <tbody> <tr> <td>103</td> <td>Ritika Kapur</td> <td>3001</td> </tr> <tr> <td>104</td> <td>John Philip</td> <td>2819</td> </tr> <tr> <td>101</td> <td>Razia Abbas</td> <td>3451</td> </tr> <tr> <td>105</td> <td>Tarun</td> <td>2971</td> </tr> </tbody> </table> <p>Sample Content of the array (after sorting)</p> <table border="1"> <thead> <tr> <th>Pno</th> <th>Pname</th> <th>Points</th> </tr> </thead> <tbody> <tr> <td>101</td> <td>Razia Abbas</td> <td>3451</td> </tr> <tr> <td>103</td> <td>Ritika Kapur</td> <td>3001</td> </tr> <tr> <td>105</td> <td>Tarun</td> <td>2971</td> </tr> <tr> <td>104</td> <td>John Philip</td> <td>2819</td> </tr> </tbody> </table>	PNo	Pname	Points	103	Ritika Kapur	3001	104	John Philip	2819	101	Razia Abbas	3451	105	Tarun	2971	Pno	Pname	Points	101	Razia Abbas	3451	103	Ritika Kapur	3001	105	Tarun	2971	104	John Philip	2819	
PNo	Pname	Points

104	John Philip	2819																														
101	Razia Abbas	3451																														
105	Tarun	2971																														
Pno	Pname	Points																														
101	Razia Abbas	3451																														
103	Ritika Kapur	3001																														
105	Tarun	2971																														
104	John Philip	2819																														
Ans	<pre>void SORTPOINTS(Game G[], int N) { Game Temp; for (int I=0; I<N-1;I++) for (int J=0;J<N-I-1;J++) if (G[J].Points <G[J+1].Points) { Temp = G[J]; G[J] = G[J+1]; G[J+1] = Temp; } }</pre>																															
(b)	An array S[40][30] is stored in the memory along the column with each of the element occupying 4 bytes, find out the base address and address of element S[20][15], if an element S[15][10] is stored at the memory location 7200.	4																														
Ans	<p>Address of S[i][j] along the column =Base Address + W [(i-L1) + (j-L2) * M] Address of S[15][10] = Base Address + 4 [(15 - 1) + 10-1) x 40]</p>																															

	$7200 = \text{Base Address} + 4 [374]$ $\text{Base Address} = 7200 - (4 \times 374)$ $\text{Base Address} = 7200 - 1496$ $= 5704$ $\text{Address of S}[20][15] = 5704 + 4((20 - 1) + (15 - 1) \times 40)$ $= 5704 + 4 \times 579$ $= 5704 + 2316$ $= 8020$	
(c)	<p>Write a function QUEINS() in C++ to insert an element in a dynamically allocated Queue containing nodes of the following given structure:</p> <pre> struct Node { int PId; // Product Id char Pname[20]; NODE *Next; }; </pre>	4
Ans	<pre> Class Queue { Node *Front, *Rear; public: QUEUE() // Constructor to initialize Front and Rear { Front = NULL; Rear = NULL; } void QUEINS(); // Function to insert a node void QUEDEL(); // Function to delete a node void QUEDISP(); // Function to display nodes ~Queue(); // Destructor to delete all nodes }; void Queue::QUEINS() { Node *Temp; Temp = new Node; cin >> Temp->PId; gets(Temp->Pname); Temp->Next = NULL; if (Rear == NULL) { Front = Temp; Rear = Temp; } else { Rear->Next = Temp; Rear = Temp; } } </pre>	

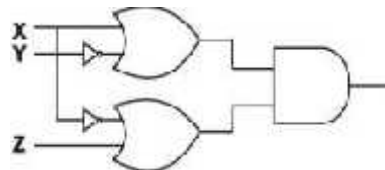

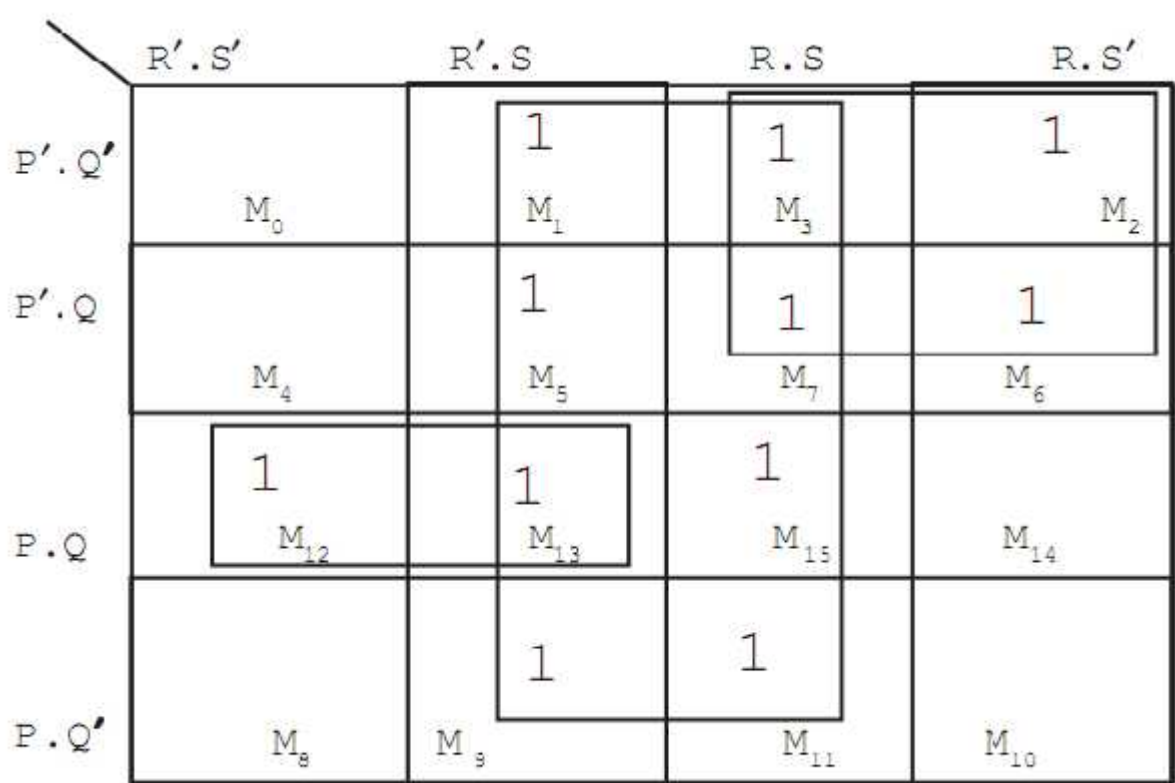

(d)	<p>Define a function SWAPCOL() in C++ to swap (interchange) the first column elements with the last column elements, for a two dimensional integer array passed as the argument of the function.</p> <p>Example: If the two dimensional array contains</p> <table><tr><td>2</td><td>1</td><td>4</td><td>9</td></tr><tr><td>1</td><td>3</td><td>7</td><td>7</td></tr><tr><td>5</td><td>8</td><td>6</td><td>3</td></tr><tr><td>7</td><td>2</td><td>1</td><td>2</td></tr></table> <p>After swapping of the content of 1st column and last column, it should be:</p> <table><tr><td>9</td><td>1</td><td>4</td><td>2</td></tr><tr><td>7</td><td>3</td><td>7</td><td>1</td></tr><tr><td>3</td><td>8</td><td>6</td><td>5</td></tr><tr><td>2</td><td>2</td><td>1</td><td>7</td></tr></table>	2	1	4	9	1	3	7	7	5	8	6	3	7	2	1	2	9	1	4	2	7	3	7	1	3	8	6	5	2	2	1	7	3

<p>4 (a)</p>	<p>Observe the program segment given below carefully and fill the blanks marked as Line 1 and Line 2 using fstream functions for performing the required task.</p> <pre>#include<fstream.h> class Stock { long Ino; // Item Number char Item[20]; // Item Name int Qty; // Quantity public: void Get(int); Get(int); // Function to enter the content void Show(); // Function to display the content void Purchase(int Tqty) { Qty+ = Tqty; // Function to increment in Qty } long KnowIno() { return Ino; } }; void Purchaseitem(long PINo, int PQty) // PINo -> Info of the item purchased // PQty -> Number of items purchased { fstream file; File.open("ITEMS.DAT",ios::binary ios::in ios::cut); int Pos=-1; Stock S; while (Pos== -1 && File.read((char*)&S, sizeof(S))) if (S.KnowInc() == PINo) { S.Purchase(PQty); // To update the number of items Pos = File.tellg()- sizeof(S); //Line 1 : To place the file pointer to the required position _____; //Line 2 : To write the objects on the binary file _____; } if (Pos == -1) cout<<"No updation done as required Ino not found..."; File.close(); } }</pre>	<p>1</p>
<p>Ans</p>	<p>Line 1: File.seekp(Pos);</p> <p>Line 2: File.write((char*) &S, sizeof(S));</p>	
<p>(b)</p>	<p>Write a function COUNT_DO() in C++ to count the presence of a word „do“ in a text file „MEMO.TXT“.</p>	

	<p>Example : If the content of the file “MEMO.TXT” is as follows: I will do it, if you request me to do it. It would have been done much earlier.</p> <p>The function COUNT_DO() will display the following message: Count of -do- in flie: 2</p>	
Ans	<pre>void COUNT_TO() { ifstream Fil("MEMO.TXT"); char STR[10]; int c=0; while(Fil.getline(STR,10,' ')) { if (strcmpi(STR, "do") == 0) C++; } Fil.close(); cout<<"Count to -do- in file: "<<c<<endl; }</pre>	
(c)	<p>Write a function in C++ to read and display the detail of all the users whose status is „A“ (i.e. Active) from a binary file “USER.DAT”. Assuming the binary file “USER.DAT” is containing objects of class USER, which is defined as follows:</p> <pre>class USER { int Uid; // User Id char Uname[20]; // User Name char Status; // User Type: A Active I Inactive public: void Register(); // Function to enter the content void show(); // Function to display all data members char Getstatus() { return Status; } };</pre>	
Ans	<pre>void DisplayActive() { USER U; ifstream fin; fin.open("USER.DAT", ios:: binary); while (fin.read((char*) &U, sizeof(U))) { if (U.Getstatus() == 'A') U.show(); } fin.close(); // Ignore }</pre>	
5		

(a)	What are candidate keys in a table? Give a suitable example of candidate keys in a table.	2																																																							
Ans	<p>✓ A candidate key is a combination of attributes that can be uniquely used to identify a database record without any extraneous data. Each table may have one or more candidate keys. One of these candidate keys is selected as the table primary key.</p> <p>✓ A table can easily have 2 or more candidate keys: for example, consider this table for hotel room reservations: CREATE TABLE reservation (reservation_no INTEGER NOT NULL, room_no INTEGER NOT NULL , from_date DATE NOT NULL , to_date DATE NOT NULL);</p>																																																								
(b)	Consider the following tables GARMENT and FABRIC. Write SQL commands for the statements (i) to (iv) and give outputs for SQL queries (v) to (viii)	6																																																							
	<p style="text-align: center;">Table: GARMENT</p> <table><tr><th>GCODE</th><th>DESCRIPTION</th><th>PRICE</th><th>FCODE</th><th>READYDATE</th></tr><tr><td>10023</td><td>PENCIL SKIRT</td><td>1150</td><td>F03</td><td>19-DEC-08</td></tr><tr><td>10001</td><td>FORMAL SHIRT</td><td>1250</td><td>F01</td><td>12-JAN-08</td></tr><tr><td>10012</td><td>INFORMAL</td><td>1550</td><td>F02</td><td>06-JAN-08</td></tr><tr><td>10024</td><td>BABY TOP</td><td>750</td><td>F03</td><td>07-APR-07</td></tr><tr><td>10090</td><td>TULIP SKIRT</td><td>850</td><td>F02</td><td>31-MAR-07</td></tr><tr><td>10019</td><td>EVENING GOWN</td><td>850</td><td>F03</td><td>06-JUN-08</td></tr><tr><td>10009</td><td>INFORMAL PANT</td><td>1500</td><td>F02</td><td>20-OCT-08</td></tr><tr><td>10007</td><td>FORMAL PANT</td><td>1350</td><td>F01</td><td>09-MAR-08</td></tr><tr><td>10020</td><td>FROCK</td><td>850</td><td>F04</td><td>09-SEP-07</td></tr><tr><td>10089</td><td>SLACKS</td><td>750</td><td>F03</td><td>31-OCT-08</td></tr></table>	GCODE	DESCRIPTION	PRICE	FCODE	READYDATE	10023	PENCIL SKIRT	1150	F03	19-DEC-08	10001	FORMAL SHIRT	1250	F01	12-JAN-08	10012	INFORMAL	1550	F02	06-JAN-08	10024	BABY TOP	750	F03	07-APR-07	10090	TULIP SKIRT	850	F02	31-MAR-07	10019	EVENING GOWN	850	F03	06-JUN-08	10009	INFORMAL PANT	1500	F02	20-OCT-08	10007	FORMAL PANT	1350	F01	09-MAR-08	10020	FROCK	850	F04	09-SEP-07	10089	SLACKS	750	F03	31-OCT-08

0	1	1	1																																				
1	0	0	1																																				
1	0	1	0																																				
1	1	0	0																																				
1	1	1	1																																				
Ans	(A+B+C).(A'+B+C').(A'+B'+C)																																						
(d)	Reduce the following Boolean Expression using K-Map: F(P, Q, R, S) = Σ(1, 2, 3, 5, 6, 7, 9, 11, 12, 13, 15)		3																																				
Ans:	<div></div> <div>Resultant Expression: S + P'R + P.Q.R'</div>																																						

7. (a)	What is the difference between STAR topology and BUS topology of network?										
Ans	<div>STAR TOPOLOGY</div> <ul style="list-style-type: none">• In star topology every computer is connected with the host computer & much wire is require.• If any client computer tops working it will not affect the whole network. 	<div>BUS TOPOLOGY</div> <ul style="list-style-type: none">• In bus topology computers are connected with each other by a wire in a approximately strait manner.• If one computer stops working the whole network will stop. 									
(b)	Expand the following abbreviations: (i) GSM (ii) CDMA		2								
Ans	(i) GSM: Global System for Mobile (ii) CDMA: Code Division Multiple Access.										
(c)	What is protocol? Which protocol is used to search information from Internet using the Internet Browser?		1								
Ans	Protocol – A network protocol is a set of rules and conventions for communication between network devices. Every computer must follow same protocol for their network. The most common protocol used by internet is TCP/IP. By the help of TCP/IP and HTTP protocols we can search information from Internet using the Internet Browser.										
(d)	Name two switching techniques used to transfer data between two terminals (computers).		1								
Ans	(i) Message Switching (ii) Packet Switching										
(e)	<p>Freshminds University of India is starting its first campus in Ana Nagar of South India with its center admission office in Kolkata. The University has 3 major blocks comprising of office block, science block and commerce block in the 5 KM area campus.</p> <p>As network experts, you need to suggest the network plan as per (E1) to (E4) to the authorities keeping in mind the distances and other given parameters. Expected Wire distances between various locations:</p> <table><tr><td>Office Block to Science Block</td><td>90 m</td></tr><tr><td>Office Block to Commerce Block</td><td>80 m</td></tr><tr><td>Science Block to Commerce Block</td><td>15 m</td></tr><tr><td>Kolkata Admission Office to Ana Nagar Campus</td><td>2450 KM</td></tr></table> 		Office Block to Science Block	90 m	Office Block to Commerce Block	80 m	Science Block to Commerce Block	15 m	Kolkata Admission Office to Ana Nagar Campus	2450 KM	4
Office Block to Science Block	90 m										
Office Block to Commerce Block	80 m										
Science Block to Commerce Block	15 m										
Kolkata Admission Office to Ana Nagar Campus	2450 KM										

	<p>Expected number of Computers to be installed at various locations in the university are as follows:</p> <table><tr><td>Office Block</td><td>10</td></tr><tr><td>Science Block</td><td>140</td></tr><tr><td>Commerce Block</td><td>30</td></tr><tr><td>Kolkata Admission Office</td><td>8</td></tr></table> <p>Suggest the authorities, the cable layout amongst various blocks inside university campus for connecting the blocks.</p> <p>Suggest the most suitable place (i.e. block) to house the server of this university with a suitable reason.</p>	Office Block	10	Science Block	140	Commerce Block	30	Kolkata Admission Office	8	
Office Block	10									
Science Block	140									
Commerce Block	30									
Kolkata Admission Office	8									
(E1)	<p>Suggest an efficient device from the following to be installed in each of the blocks to connect all the computers: (i) MODEM (ii) SWITCH (iii) GATEWAY</p> <p>Suggest the most suitable (very high speed) device to provide data connectivity between Admission Office located in Kolkata and the Campus located in Ana Nagar from the following options:</p>									
(E2)	<ul style="list-style-type: none">- Telephone Line- Fixed- Line Dial-up connection- Co-axial Cable Network									
(E3)	<ul style="list-style-type: none">- GSM- Leased Line- Satellite Connection									
(E4)										
Ans E1	<div><div>Freshminds University Ana Nagar Campus</div><div><div>Office Block</div><div><div>Commerce Block</div><div>Science Block</div></div></div></div>									
Ans E2	Science Block as it contains maximum number of computers.									
Ans E3	SWITCH									
Ans E4	Satellite Connection
